

INTRODUCING THE CRUCK HALL

A premium **large-scale timber event structure** combining engineered **modular** construction with exposed timber architecture to create immersive, **high-impact** venues.

A Large-Scale Timber Event Structure Designed to Create Atmosphere

The **Cruck Hall** is a premium timber-framed event structure designed for **high-capacity events**, immersive hospitality environments and destination experiences.

Combining engineered timber architecture with flexible modular construction, the Hall delivers the visual impact of a permanent venue while retaining the adaptability of a temporary structure.

Whether used for festivals, corporate hospitality, dining experiences, weddings or winter activations, the Cruck Hall is designed to create memorable spaces with **warmth, character and scale**.

Architectural by Design

The defining feature of the Cruck Hall is its exposed timber structure and elevated roofline, creating a dramatic internal environment with natural warmth and strong visual identity.

Unlike conventional marquee systems, the Cruck Hall incorporates engineered internal timber uprights and framing throughout the structure - an intentional architectural feature that gives the venue its distinctive hall-like aesthetic.

Structural Information

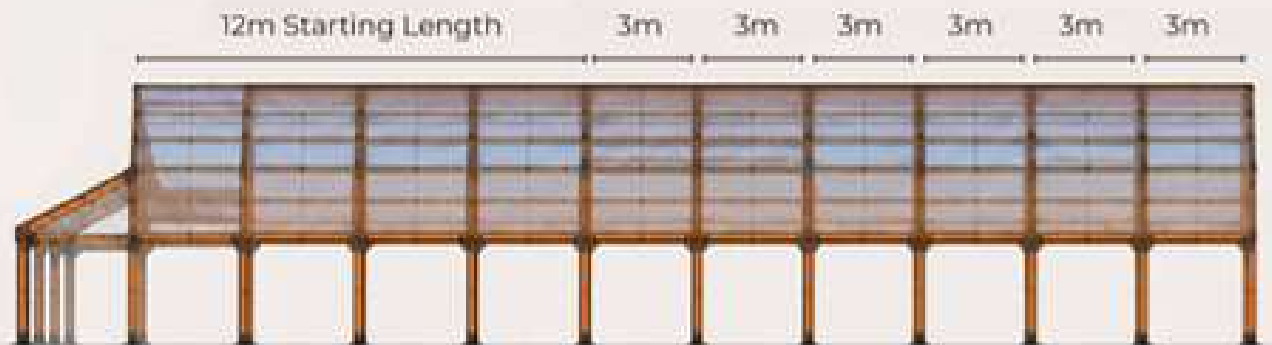

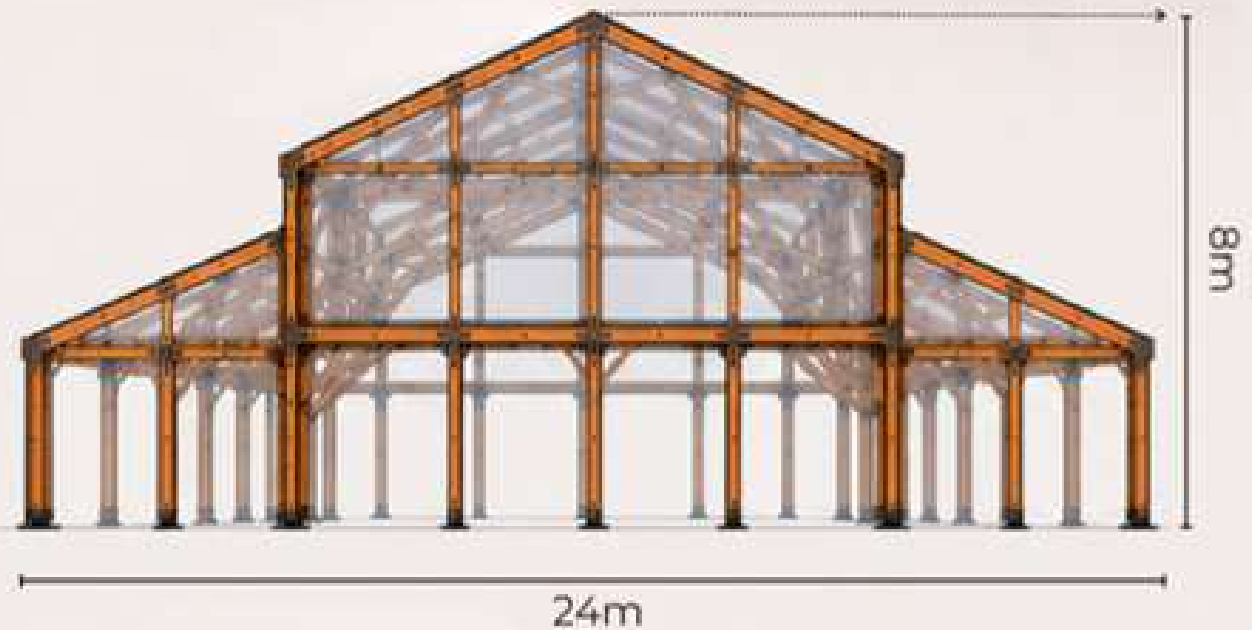

The Cruck Hall is:

- **24m** wide
- Starts at 12m length

The structure can then be extended in **3m modular bays** to reach your desired size.

At its highest point, the structure reaches **8m to apex**

This modular format allows the Hall to scale for a wide range of event capacities and layouts.

Flexible Event Applications

The **Cruck Hall** has been designed to adapt across a broad range of event environments, including:

Festivals

Large scale dining spaces

Corporate Events

Brand Activations

Weddings & Private Celebrations

Food Halls & Market Concepts

Live entertainment venues

Winter & Festive Experiences

Interior Possibilities

The wide-span layout and generous roof height allow the Hall to accommodate a variety of internal configurations, including:

- Long bar installations
- Food vendor areas
- Lounge seating
- Dancefloors
- Staging & entertainment
- Large communal dining layouts
- Feature lighting installations

The exposed timber frame also creates excellent opportunities for decorative styling, suspended lighting and immersive production design.

Capacity Guidance

Capacity will vary depending on the intended use of the venue. As a guide we work to the following calculations:

Event Type	Space Allowance
Seated Dining	1.8m ² per person
Standing Reception	0.75m ² per person
Standing Festival / Concert Style	0.5m ² per person

To calculate approximate capacity:

Divide the total square meterage by the required space allowance.

Final capacities will vary depending on bars, staging, catering areas, furniture layouts and production requirements.

Examples

24m x 24m Cruck Hall (576m²)

Seated Dining

320 People

Standing Reception

768 People

Standing Festival

1152 People

24m x 48m Cruck Hall (1152m²)

Seated Dining

640 People

Standing Reception

1536 People

Standing Festival

2304 People
